**American Arborvitae** is an attractive pyramid-shape evergreen. This specimen is hardy, grows well in a variety of soils, and is easily transplanted.

The Arborvitae is excellent for screens and tall hedges; can be planted 3' apart for a low-maintenance hedge.

This tree is a good choice for wildlife as well, providing shelter in the winter and nesting sites for grackles, robins, and house finches in the summer. The seeds are eaten by red squirrels and birds such as pine siskins.

**Eastern White Pine** does best in evenly moist, rich, well-drained, acidic soils in full sun. Soils that are alkaline in pH and poorly drained are not recommended. This tree is often used for windbreaks and screens.

This tree can grow to 80 feet and has a rapid growth rate.

Eastern white pine seeds are favored by black bears, rabbits, and many birds. White pines provide nesting sites as well for many birds including woodpeckers, common grackles, mourning doves, chickadees, and nuthatches.

**American Redbud** is a small tree with pink blooms in early spring. The foliage is heart-shaped, changing to yellow in the fall. The early blossoms draw in nectar-seeking insects, including several species of early-season butterflies. A few songbirds, such as chickadees, will eat the seeds.

**Heartnut (Siebold Walnut)** produces edible nuts that are heart shaped and easy to shell.

It is best suited to well drained sand and clay loam soils with a pH of 6 to 7. Areas where black walnut and butternut grow wild would likely be good locations to plant the Heartnut seedlings.

**Hemlock** is hardy and grows well in a variety of soils. It usually prefers part shade but will do well in full shade or sun. It is best to shelter small plants from drying winds.

Hemlocks are good for windbreaks and wildlife. This tree provides excellent cover for deer and songbirds. It may provide nests for different warblers. Seeds are eaten by juncos and chickadees.
**Norway Spruce** is fast-growing and can reach 80 feet in height. It is valuable as a windbreak and wildlife shelter tree. Norway Spruces prefer moist but well-drained soil but can do well in poorer soils.

- Do not plant in wet soils.
- Prefers full to partial sun.
- Fastest growing of the spruces.
- Matures at 60 ft.

**Scotch Pine ‘Macedonia’** is very hardy and disease resistant. This conifer should grow 60 to 70 feet in height, with a spread of 15 to 20 feet. It does best in well-drained soils but tolerates poor soils such as sandy, rocky heavy clay well. Plant in full sun for best growth. Scotch Pine is the most common Christmas tree in the USA.

The **Shellbark Hickory** is a high-branching tree and sturdy tree with shaggy bark. The nuts are large and sweet. The tree will bear nuts in 10-12 years and while it bears annually, it doesn’t typically bear heavily.

This tree does best in full sun and has a slower growth rate (not exceeding 12 inches a year).

**White Pine** does best in evenly moist, rich, well-drained, acidic soils in full sun. Soils that are alkaline in pH and poorly drained are not recommended. This tree is often used for windbreaks and screens.

This tree can grow to 80 feet and has a rapid growth rate.

---

**Planting Tips for Bare Root Seedlings:**

- Keep seedlings moist – Dry roots kill seedlings.
- Avoid exposing roots to wind and sun.
- Make the planting hole wide and deep enough to insert the root system so the seedling is straight & the roots are straight down in the planting hole.
- The seedling should be packed firmly in the soil (a firm tug should not pull out the seedling).
- Don’t plant when the ground is frozen.
2021 TRUMBULL SWCD TREE ORDER FORM: Deadline to order is Friday, March 26, 2021

Tree Order Pick-Up (& Bulb Order Pick-Up) TUESDAY, APRIL 20, 2021 9:00 AM – 6:30 PM

*Flower Barn at the Trumbull County Fairgrounds*
899 Everett Hull Rd. Cortland, OH 44410

**Ordering & Tree Information:**
1. Packets are reserved on a first come, first served basis & we may sell out.
2. Please mark pick-up dates on your calendar as reminders will not be sent out!
3. Please note the number of trees per packet – packets cannot be split.
4. We may need to make reasonable substitutions based on availability of certain species.
5. Plants are bare-rooted and packed in a moisturizing gel - Bare root nursery stock is perishable. The seedlings should be planted as soon as possible after pick-up.
6. Efforts should be made to avoid exposure to sun and wind during planting to help ensure survival.
7. For more information about the sale, please contact Amy Reeher at 330-637-2056, ext. 8624 or Eric Zamary, ext. 8621

**Mail order form & payment to:**
Trumbull SWCD
520 W. Main St, Suite 3
Cortland OH 44410
